Lecture 2: September 7

Discovery and Research

Reminders

- Post-Lecture Kickoff Meeting with Mentors
- Trello boards have been sent out
- Tuesday's class will be intro to presentations
- Project proposal draft start with today's brainstorming as baseline to have conversations with mentors/instructors in week of September 19
- Resumes due by Sunday night

Agenda

Lecture

- Research and Discovery Phase
- Types of questions to ask
- What is Success
- Frameworks, Considerations
- Research Methodologies and Tooling
- Working with Clients / Customers
- Roles: UX Researcher, UX Designer, Data Scientist

Group Meeting (with Mentors) - 8pm

Product Development Lifecycle

1. Ideation	2. Product Defined	3. Prototyping	4. Validate & Test	5. Launch
Explore idea generation Brainstorm with team	Define Use Cases Estimate LOE and development plan (steps and tasks)	Build iterative and demo-able pieces of the project/solution	Ensuring the product works Validating in eyes of users	Feature complete Begin GTM execution
Exit Criteria: Problem Statement Defined	Exit Criteria: Product Requirements and Project plan made	Exit Criteria: Alpha and Beta releases	Exit Criteria: Product quality is demonstrated	Exit Criteria: Product is launched to users
DISCOVERY		DEVELOPMENT		LAUNCH

Discovery Phase

1. Ideation	2. Product Defined	3. Prototyping	4. Validate & Test	5. Launch
Explore idea generation Brainstorm with team	Define Use Cases Estimate LOE and levelopment plan steps and tasks)	Build iterative and demo-able pieces of the project/solution	Ensuring the product works Validating in eyes of users	Feature complete Begin GTM execution
Exit Criteria: Problem Statement Defined	Exit Criteria: Froduct Requirements and Project plan made	Exit Criteria: Alpha and Beta releases	Exit Criteria: Product quality is demonstrated	Exit Criteria: Product is launched to users
AGILE	AGILE	AGILE	AGILE	AGILE
DISCOVERY		DEVELOPMENT		LAUNCH

Key Questions to Begin Discovery

What is the problem? What are our goals?

What does success look like?

Where to start?

Top-down: Leadership sets Objectives or "Top Projects" and team executes on solutions to those objectives/project ideas

OKRs: Objectives and Key Results (Introduced by Google in 1999)

KPIs: Key performance indicators

Bottoms-up: Product team pitches roadmaps to leadership and priorities are set based on those ideas

Combo: Leadership sets objectives and team co-produces strategy for execution

Goals for Senior Design

From <u>Project Criteria</u>, projects must include:

- Technical Challenges
- Algorithmic Components

What is the problem?

Who are your users?

- "What do your users need?"
- "What are your users struggling with?"
- "How can you help your users?"

What does Success look like?

Are there *company-wide goals* (OKRs) that this project needs to align with?

- Based on product stage: Introduction, Growth, Maturity, Decline
- Based on customer journey: Awareness, Consideration, Conversion, Loyalty, Advocacy

Does my *team* have goals we want to hit?

- Improve certain metric (KPI)
- Implement new framework
- Etc.

Is there anything I, *myself*, want to get out of this project?

• Learn something new

GIST Framework

GIST: Goals, Ideas, Steps, and Tasks

Goals: What do we want to achieve?

Ideas: How can we achieve these goals?

Steps: Later lecture

Tasks: Later lecture

Team Workshop

What goals do you want to achieve? What problems do you want to solve? Who are your users?

In your groups, brainstorm these questions in a shared document, scratch paper, or even the room's whiteboards. Be sure to SAVE your notes!

September Goal

Answer the question: What are you building and why?

Discovery and Research Methods

If we have a product, what can our product already tell us about the problems? If we don't have a product, how can we learn more about the problems?

Consideration when choosing research methods:

- Market size, Customer population size
- Type of product
- Cost

Research Methods:

- Qualitative Tests
- Quantitative Research

Discovery and Research Methods

Mix of live and asynchronous, in-product and mockups, anecdotal and aggregate

Qualitative Tests

- Usability Tests
- User Interviews
- Conferences, Social Events
- Competitive Research

Quantitative Research

- User surveys
- User billing, segmentation data
- Product data
- A/B Testings

Working with Clients / Customers

B2B

- Small customer pool
- Intimate convos
- Higher value per customer

B2C

- Large customer pool
- More quantitative methods used
- Lower value per customer

Research

• More explicit user groups

B2B2C, B2G, and more...

Research Tools

Viewing the User Behavior

- Live Interviews
- Recorded User Sessions
- Full Story
- Page Flows

Quantitative Research

- Google Analytics
- MixPanel
- Amplitude
- Looker
- Product Forums

Team Workshop

Competitive Research: what problems are already being addressed? How do others solve those problems?

UX Researcher

Who? Roles and Responsibilities?

- Uncovers user behaviors, needs and motivations to make products, services and websites more intuitive and enjoyable for users
- Uses qualitative and quantitative methods, they conduct comprehensive research
- Share the insights from research with the UX designers
- Works with Product Managers, Designers, and Engineers

UX Designer

Who? Roles and Responsibilities?

- Builds out UX ideas, prototypes, and designs based on the product's problem to be solved and success criteria
- Collaborates with Product team in order to enable engineers to build technical solution
- Works with Product Managers, Engineers, and other project/product team members

Data Scientist / Analyst

Who? Roles and Responsibilities?

- Find patterns and trends in datasets to uncover insights
- Create algorithms and data models to forecast outcomes
- Deploy data tools
- Share insights with org and team
- **Scientist**: Works to create data vision and strategy for organizations
- **Analyst**: Usually works with a team to help uncover findings based on team's needs
